## GOCR Windows Frontend [Mac/Win] [Latest] 2022

- GOCR uses the following features to recognise characters in an image: - Reverse Google Image Search. This is extremely useful for general text recognition. - Regular expression matching to find words. - Word frequency analysis. - Character n-grams - Graphic features. - Rotation to suit the paper. - Rotate canvas to suit screen orientation. - Pixel or sub-pixel matching. - Image segmentation. - Image resizing. - Image splitting. - Image mirroring. - Improved LCH detection. - LCH weight adjustment. - Pixel colour adjustment. - Screen rotation. - Centered or non-centered screen zoom. - Partial character recognition. - Performance optimization. - Big performance improvements. - Memory optimization. - Zebra Striping. - Performance improvements with large font size. - Performance improvements with selected area. - Performance improvements with white background. - Performance improvements with black background. - Unicode support. - CodePage 866. - Low resolution images. - High resolution images. - Old and new line feed support. - Character matching. - Character matching and recognition. - Character matching and recognition with Spanish language. - Character matching and recognition with German language. - Character matching and recognition with French language. - Character matching and recognition with Italian language. - Character matching and recognition with Hebrew language. - Character matching and recognition with Portuguese language. - Character matching and recognition with Portuguese language. - Character matching and recognition with Russian language. - Character matching and recognition with Korean language. - Character matching and recognition with Japanese language. - Character matching and recognition with Chinese language. - Character matching and recognition with Chinese language. - Character matching and recognition with Japanese language. - Character matching and recognition with English language. - Character matching and recognition with English language. - Character matching and recognition with English language. - Character matching and recognition with Spanish language. - Character matching and recognition with Hebrew language. - Character matching and recognition with German language. - Character matching and recognition with French language. - Character matching and recognition with Italian language. - Character matching and recognition with Portuguese language. - Character matching and recognition with Russian language. - Character matching and recognition with Korean language. - Character matching and recognition with Japanese language. - Character matching and recognition with Chinese language.

### What's New in the?

GOCR is an optical character recognition (OCR) program for Linux and Windows. This frontend for GOCR is graphical and is designed to be simple to use, just select the graphics file that you want to recognise, and the output will be shown to you. You can then copy this output and paste it to somewhere useful. Most major graphical file formats are supported. Why to use GOCR? GOCR is an open source Optical Character Recognition (OCR) program that runs on Windows, Linux and MacOSX. It is a command line program that allows you to recognise characters from an image file. This frontend for GOCR is graphical and is designed to be simple to use, just select the graphics file that you want to recognise, and the output will be shown to you. You can then copy this output and paste it to somewhere useful. Most major graphical file formats are supported. GOCR allows you to easily recognise characters on images in a batch process, allowing you to automatically convert a large number of images to text in a short time. It is ideal for recognising characters on many images and for quickly producing a document containing the image captions you have recognised. The program is developed by the Open Source Initiative to provide the general public with a free, reliable, accessible and open-source software tool. What is GOCR?
